govinity + RECORD

From Gavel to Minutes, in Record Time

Live streaming, diarized transcripts, and auto-indexed agendas - feeding the minute-authoring workspace your clerks have been waiting for. RECORD is the meeting capture module of the Govinity Open Governance Operating System.

Compliance Isn't Transparency

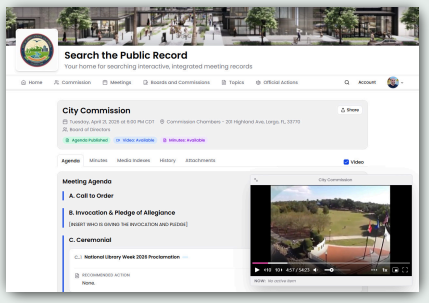

Open meetings laws say the public record must be available. They don't say it has to be useful. For most agencies running legacy stacks, it isn't.

- **Disconnected by default** - One vendor for video, another for transcripts, a third for minutes, maybe some software to glue it together. Nobody, staff or citizen, can actually follow what's happening
- **Transparency, box checked** - Files get posted. The law is satisfied. The resident trying to understand what changed about her commute is still on her own
- **ADA as a band-aid** - Captions bolted on after the fact, transcripts that arrive days late, accessibility treated as a compliance audit instead of a sustainable architecture
- **Hand-built or hired out** - Minutes get ground out by hand in Word and legacy systems, or farmed out to consultants.

Open by Design

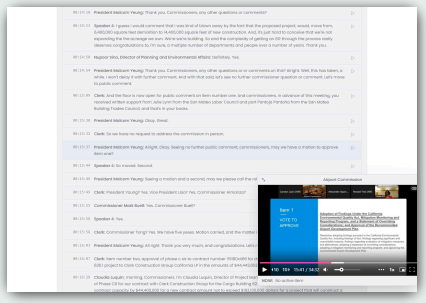

Record runs the full arc of the public meeting from broadcast, structure, to minute-authoring as one connected workflow.

- **One connected workflow** - Live broadcast, on-demand archive, transcripts, and indexing in a single module. Staff and citizens follow one thread instead of stitching four together
- **Findable, not just posted** - Every video chaptered to its agenda, every word searchable. Citizens land on the moment that affects them; the institution searches itself
- **Accessibility by design** - Live captions during the broadcast. Diarized transcripts within minutes. Real ADA, architected in, not audited around
- **AI-assisted, clerk-authored** - Clerks capture motions, roll calls, and votes against the indexed video and transcript. AI structures the source; the clerk remains the author of the official record

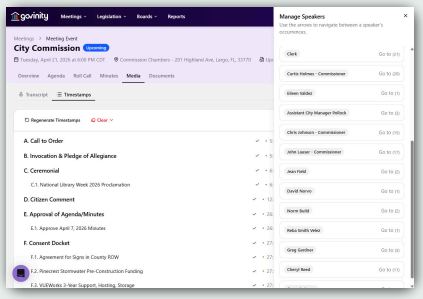

From Live to Library

Live broadcast and the on-demand archive in the same module as where you'll be working on your post meeting minutes.

Every Voice, Every Word

Live captions during the broadcast. Diarized transcripts ready minutes after adjournment — every speaker named, every statement searchable.

Get the Whole Story

Every video auto-chapters to its agenda items "auto-magically!" Click an item, land on the moment. Clerks draft official minutes in record time.
