govinity + TENURE

Connect Citizens to Service through Membership and Applicant Tracking

Reappointments. Term expirations. Unexpected vacancies. TENURE handles it all as a core module of the Govinity Open Governance Operating System, the modern operational efficiency platform purpose built for public agencies.

Adhering to the Rules is Hard

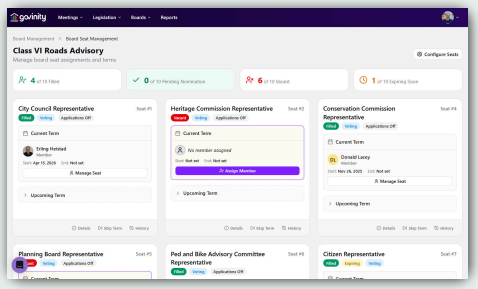

Managing applications to advisory board member seats is a truly complex function of any public agency enterprise, large or small, that's running on spreadsheets, online forms, emails, outdated software

- **Frankenstein solutions** - Staff cobble together spreadsheets, forms, and manual uploads just to make their "board software" actually work
- **Invisible opportunities** - Citizens can't see what's open, who serves, or when terms end, and when they do, it's not up-to-date
- **Term tracking failures** - Current systems fail at staggered terms, sudden resignations, or application periods that sometimes utilize deadlines and sometimes do not.

We Thought of Everything!

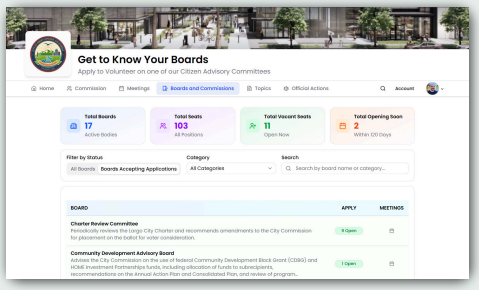

Transform vacancies into an open, enjoyable process. Tenure provides a complete appointment lifecycle solution that proactively fills appointments using your existing applicant database plus modern outreach methods.

- **Unified system of record** - Applicants and members are part of the resource management core of Govinity - no more settling for "add-ons"
- **True civic transparency** - Public portal shows every opportunity, current member, and upcoming vacancy... democratizing modern access to service
- **Intelligent term management** - Automatically handles staggered terms, resignations, and term limits while alerting staff and allowing flexibility.

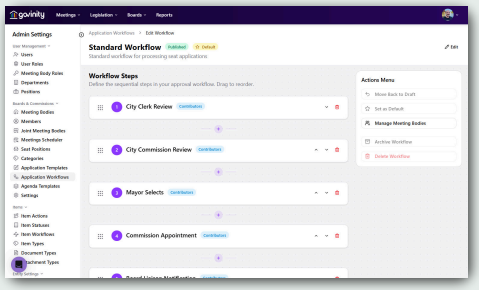

Simplify Governance

The seat, term, vacancy, docket, appointment process is complex, but it doesn't have to be hard. Simple to use for smaller agencies, powerful enough to manage an entire state

Attract Excellence

Stop losing great candidates to clunky 1990s-era application forms - give citizens the polished experience they deserve when stepping up to serve

Built for Enterprise

Customizable forms, intelligent workflows, Build and schedule your own reports, built into the core admin engine that powers your entire open governance process
